

Greenhouse Frosting Liquid
287 With Binder
 For Commercial Use

READ ENTIRE CONTAINER LABEL BEFORE USING THIS PRODUCT

**KEEP OUT OF REACH OF CHILDREN
CAUTION**

Do not take internally. Use only with adequate ventilation. Keep container closed when not in use. Keep from freezing. Avoid breathing vapor, spray mist or sanding dust. CONTAINS CRYSTALLINE SILICA. Sanding dust may cause eye and skin irritation. Avoid contact with eyes. Avoid prolonged or repeated contact with skin. Long-term exposure to Crystalline Silica may cause lung damage and cancer; risk depends upon duration and level of exposure to sanding dust.

WARNING: This product contains chemicals known to the State of California to cause cancer and birth defects or other reproductive harm

DIRECTIONS FOR USE

A premium quality greenhouse frosting liquid concentrate designed to provide a cost effective liquid shade compound for maximum reflection, ease of application and removal and for ultimate wear while needed. Available in a variety of formulas to provide the grower with flexibility to meet specific growing needs. See individual product data sheets for specific formulations available. This product can be applied to glass, fiberglass or polysheeting by brush, roller, spray, or splash method. The ease of application and removal depends on many factors including weather, the number of applied coats, type of covering and the product formulation selected. It is highly recommended that a test be performed on a small area prior to any full-scale application to insure proper application, adhesion and compatibility with the surface covering. On new greenhouse coverings that have not been previously tested for compatibility of application with the liquid shade compound, check with the manufacturer for suitability of applying the shade compound. Always perform a test to assure compatibility.

The surface to be coated must be free of any loose or foreign material and dry, preferably after mid-day sun has dried any morning dew and warmed the surface for better adhesion and quicker dry time. This product will dry in 5 to 15 minutes under normal application conditions. Apply shade compound when rain is unlikely to occur within 24 hours. Stir greenhouse frosting concentrate well before mixing with water. The average dilution rate is 8 gallons of water to one gallon of greenhouse frosting concentrate, but this may vary depending on specific application, crop, location, and grower preference. Shade compound adheres more strongly to coarse surfaces, such as old fiberglass, infrared film, or weathered greenhouse films.

Standard hydraulic spray equipment is suitable for applying shade compound. All equipment should be thoroughly cleaned after each application. Application under a hot midday sun may bake the shade compound onto some surfaces such as plastic film, making later removal more difficult. Residue on new greenhouse films may act as a release agent causing a lack of adhesion and early washoff. A mist coat of the shade compound followed by a regular application has proven effective in promoting normal adhesion and wear. The VOC of this product does not exceed 250 grams per liter. Does not contain lead, mercury or chromium. Protect from freezing.

CONDITION OF SALE AND WARRANTY

Seller warrants that the product conforms to its chemical description and is reasonable fit for the purpose stated on the label when used in accordance with directions under normal conditions of use, but neither this warranty nor any other warranty of merchantability or fitness for a particular purpose, express or implied, extends to the use, storage or handling of this product contrary to label instructions, or under abnormal conditions, or under conditions not reasonably foreseeable to seller, and buyer assumes the risk of any such use. These risks include, but are not limited to damage to plants, crops and animals to which the material is applied, failure to control pests, damage caused by drift to other plants or crops, and personal injury.
